About Us

100% Australian owned and operated for over 25 years. The Optical Superstore offers affordable eyewear and genuine value across its frame and lenses ranges. With over 65 store locations Australia-wide, The Optical Superstore is committed to providing the latest technology products, competitive prices, great customer service and expertise.

Your vision is our vision.

Customer Focus

We empower our staff put our customers and their needs at the forefront of our minds.

Integrity

We deliver affordable eyewear and genuine value whilst achieving best quality outcomes for our customers.

Clinical & Optical Excellence

We continue to deliver with national training programs and continual professional development.

The Optical Superstore Safety Eyewear

The New Standard in Prescription Safety Eyewear

The Optical Superstore safety range offers medium-impact safety eyewear under the 1337.6 ANZ Standard with a range of medium impact certified products.

Low vs medium impact

The type of safety eyewear you wear is dependent on the task or activity conducted, and the risk that task can have on damaging your eyes. The Optical Superstore Safety Eyewear offers only a medium impact range.

Low Impact: Suitable for tasks where there is low risk of damage to the eyes, with no debris, however some protection is still required. Suitable for occupations such as a dentist, doctor or any chemical laboratory related tasks.

Medium Impact: Suitable for occupations where there is a high risk of debris that can damage the eyes, or where blunt objects are utilised. This can include mining, construction, grinding, farming and agriculture, woodworking, machinery usage, hammering or bricklaying.

The Optical Superstore Medium Impact 1.53 Phoenix Safety Lenses

The Optical Superstore offers a unique 1.53 index Phoenix material that is certified for medium impact to the SAI Global standard AS/NZS 1337.6. Phoenix is extremely lightweight and is resistant to most common chemicals including acetone, which can be a problem for polycarbonate. Phoenix also has better optical clarity properties and is more scratch resistant. Available as standard with a scratch resistant hard-coat or an anti-reflective multi-coat guaranteeing crisp, clear vision across the entire surface of the lens.

Chemical Resistance of Certified Products

Phoenix 1.53 (polyurethane) Safety Lenses are complete resistant to common chemicals.

Items	Phoenix 1.53	Polycarbonate 1.59
Acetone	yes	no
Perfumes	yes	no
Hairspray	yes	no
Household cleaners	yes	no
Solvents	yes	no
Windex	yes	no
Ammonia	yes	no

To ensure the highest quality products The Optical Superstore offers certified, accredited medium-impact lenses. Each safety frame and lenses are independently tested by a NATA accredited laboratory for medium-impact, ballistics testing, penetration tests at both ambient and elevated temperatures, thickness criteria and prescription accuracy. SAI Global conduct a bi-annual audit to ensure all records and batch testing samples are maintained. Certification only applies to medium-impact products.

Price List

Package Price is the Complete frame & Lens package, this includes a frame valued at \$50. If a frame priced at \$70/\$80 is chosen an extra \$20-\$30 should be charged on top of the package price, refer to frame list below.

FAQs

Does it matter which eyewear I select?

Although style is a consideration, other features may be more important. These include:

- Size and fit of eyewear
- AS/NZS approval
- Lens tint and colour
- Splash and dust hazard protection
- Protection from irritant vapors and gases
- Compatibility with other PPE
- Need for secondary protection, such as face or welding shield
- Presence of electromagnetic radiation, including Ultra-Violet and Infra-Red
- Vision correction needs (prescription)

How do I differentiate between low and medium impact hazards?

Typical tasks giving rise to low and medium impact hazards include the following:

- **Low impact:** hammering, handling wire, rocks, bricks or cement, manual chipping, riveting, grinding powders in chemical laboratories.
- **Medium impact:** grinding, stone-dressing, wood-working, machine disc cutting.
- **Other hazards:** fumes, dust or splashes. Consider all protection and comfort requirements as well as practicality when deciding on the right

What are the benefits of prescription safety eyewear?

Compared with previous methods used to obtain medium impact protection, prescription safety eyewear may have the following advantages:

- Increased comfort
- Improved vision, leading to greater precision and efficiency while working
- Reduced weight
- Less restriction on movement and visual field
- Improved employee compliance, leading to potential reductions in lost time injuries (LTIs) and workers compensation claims.
